

FOOD STANDARDS SCOTLAND RISK MANAGEMENT POLICY AND GUIDANCE

Date of Issue:		July 2016						
Revision Date:		February 2019						
Version Number:		5						
Document Location:		A15185820						
Number of Pages:		20						
	Name:	BRIAN JACKSON						
	Position/Role:	BUSINESS CHANGE MANAGER						
AUTHOR	Signature:	and the second						
	Name:	GARRY MOURNIAN						
APPROVER	Position/Role:	HEAD OF CORPORATE SERVICES						
AFFRUVER	Signature:	add						

VERSION HISTORY

Version no.	Description of Changes
1	Creation of FSS risk management policy and guidance.
2	Updated with revised Saltire links to SG risk guidance and principles.
3	Minor updates to narrative.
4	Minor updates to narrative, update to risk tolerance statement, re-alignment with current SG principles and inclusion of new risk template annex
5	Minor updates after SMT review

1.0 INTRODUCTION

The aim of this document is to detail how and why Food Standards Scotland carries out risk management, to lay out the roles and responsibilities across the organisation and to establish the process and techniques FSS utilise to support risk management in accordance with the principles laid out in the FSS Risk Policy Statement.

2.0 CORPORATE STATEMENT ON RISK

FSS's primary concern is consumer protection through making sure food is safe to eat, ensuring consumers know what they are eating and improving nutrition. With that in mind, our vision is to deliver a food and drink environment in Scotland that benefits, protects and is trusted by consumers. By undertaking effective risk management we will better manage the successful delivery of our objectives by:

- Reducing the possibility our objectives are jeopardised by unforeseen events by constraining threats to an acceptable level;
- Increasing confidence in achieving our desired outcomes;
- Recognising and taking informed decisions to manage and exploit opportunities that may offer an improved way of achieving objectives;
- Providing reasonable assurance to the FSS Board that we are managing risks as part
 of our internal controls.

Within FSS we shall operate three tiers of risk register with discretion at a fourth (project) level in order to manage our risks accordingly:

- Level 1 the strategic risk register which outlines strategic risks to the organisation.
 This will be jointly owned by the Senior Management Team (Executive) and the Board (non-executive). The Senior Management team will be responsible for managing risks identified on the Strategic Risk Register on behalf of the organisation.
- Level 2 Senior Management Team Risk Register covers the tactical and operational risks faced at a Senior Management Team level that will impact the delivery of the Corporate Plan.
- **Level 3** Risk registers covering the tactical and operational risks faced in delivering the FSS key programmes of work and the Essential Core Activities both of which seek to deliver the strategic outcomes and corporate plan objectives of FSS.

The management and accountability of Programme risk registers is with the Senior Responsible Owner (SRO) with support from the Programme Management Office (PMO).

The management and accountability of Essential Core Activity risk registers is with the relevant FSS Directors in addition to the three tiers of risk register.

Project – Risk registers may be developed and established to monitor risks to the
delivery of specific projects or pieces of work should it be considered that the nature of
the work requires it. Project Managers will be responsible for the project risk registers
with support from the PMO.

3.0 RISK APPETITE IN FSS

Our risk appetite reflects our overall Strategy, Corporate Plan and stakeholder expectations and as part of FSS governance the Board has considered its risk appetite with regards to the successful delivery of the FSS strategy.

With regards to public health the Board has generally a low appetite for risk. This is because consumer protection and public health are at the core of what we do. Ensuring food is safe is our primary, non-negotiable, function and forms the basis of the trust consumers have in FSS. On public finance the Board has a low tolerance and would expect the Accountable Officer to apply the principles of sound financial management, managing within budget.

Clearly any organisation needs to think about its reputation and how an organisation is perceived is important. Perceptions will vary between different stakeholders but the trust of consumers is paramount. In this regard the Board's appetite for risk is medium tolerance. During Level 2, 3 & 4 incidents, the risk appetite for reputation should be low to align with the low tolerance risk appetite in relation to protection of public health.

Obviously, it is important that we work collaboratively and effectively but it is possible given the breadth of our remit that there are opportunities for disagreement. As our organisation is non-Ministerial, it is important that we retain and use that independence from Government wisely, taking account of, but not being wholly influenced by the views of others.

Given the current landscape and the challenges the organisation faces, the Board has a high tolerance for innovation and taking well managed and thought-through risks in areas such as piloting of new ideas, delivery models etc.

4.0 FSS RISK FRAMEWORK

FSS have adopted the principles of the Scottish Government risk framework. The methodology is straightforward and aims to assist the organisation manage risk effectively, following 5 distinct phases.

- Clarifying Objectives: This may be established through Directorate, Branch or Programme/Project planning. There should be a direct link between what you want to achieve and the risks you are managing to make the risk environment meaningful.
- Identifying Risks In order to manage risks, you need to know what risks are faced
 and to undertake an evaluation this is the first step in building a risk profile an
 overview of the short, medium and long term risks that may affect the achievement of
 objectives.
- Assessing Risks: This enables the effective prioritisation of risks in relation to
 objectives and ensures attention is focussed on the key risks and resources are
 concentrated where they are most required.
- Addressing Risks: This is the stage where actions are agreed in order to control or mitigate the risks that have been identified.
- Reviewing and Reporting Risks: This ensures that new opportunities and threats or changes to existing risks are managed. Reporting changes helps to raise awareness and coordinate responses to key risks.

5.0 CLARIFYING OBJECTIVES

The first phase of the risk management framework is to understand the objectives that you are trying to achieve. This could be at an FSS, Directorate, Branch, Programme or Project level.

This will then be the focus of any risk management information – a risk is anything that can impede or enhance your ability to meet current or future objectives. Through this process, FSS are aiming to improve our performance through better informed decision making and planning. Risk identification needs to be undertaken with a clear strategy and clarity of purpose and is an important part of managing priorities effectively.

The aim here is to ensure a direct link between risk management and the aims and objectives – whether it be organisational or at an individual project level. It allows focus to be achieved on relevant risks that may present an opportunity or threat to the stated goals or deliverables.

At an organisational level, this should be consistent with the FSS business planning process:

- Delivery Objectives ("What") contribution to the FSS statutory responsibilities and Strategy
- Business Objectives ("How") proposals within the FSS Corporate Plan that will deliver the business Strategy
- Risk Management ("What If") the approach to managing risk within FSS as outlined in this policy guidance

6.0 RISK IDENTIFICATION

In order to manage risk, FSS needs to know what risks it faces, and to evaluate them. Identifying risks is the first step in building the FSS risk profile. There is no single right way to record the FSS risk profile, but maintaining a record is critical to effective risk management. The identification of risk can be separated into two distinct phases:

- Initial risk identification perhaps a new project or activity undertaken by FSS
- Continuous risk identification new risks which previously did not arise or changes in existing risks.

In either case risks should always be related to the delivery of objectives. Risks can only be assessed and prioritised in relation to objectives (and can be done at any level – personal to the organisational). Care should be taken to avoid confusion between the impacts that may arise and the risks themselves, and to avoid stating risks that do not impact on objectives; equally care should be taken to avoid defining risks as simply the converse of the objectives. A statement on risk should encompass both the possible cause and the impact to the objective which might arise.

In FSS, risks should be described using the following formula where possible and recorded on the approved risk register template in Annex 1:

EVENT – there is a risk that

CAUSE - as a result of

EFFECT – which may result in

Strategic risks will be identified by the Senior Management Team/FSS Board or will be adopted following escalation from Directorate or Programme/Project risk registers.

It is useful to have a systematic process in place to help identify risk and give assurances that a complete risk profile is articulated. Within FSS, two simple techniques are recommended that provide a wide scan of areas that may affective objectives.

PESTLES

Category	Examples				
Political	Changes in SG policy, Stakeholder relationships, Ministerial changes, wider political changes – EU referendum and UK position.				
Economic	Budget constraints, effect on economy on food and consumer behaviours, sustainability.				
Social	Demographic influence on FSS policy, Trust of consumers, Staff implications, Changes in consumer engagement methods.				
Technological	Cost and efficiency of IT solutions, Change in technology and obsolescence, Technical competence of organisation,				
Legal	EU requirements, Procurement processes around Official Controls and other key contracts, Accounting rules, legal challenge on FSS policies/proposals.				
Environmental	Changing environmental standards, Changes to consumer shopping habits, Staff changes and loss of expertise, change in official control delivery methods.				
Security	Physical assets, Information Security and data protection.				

SWOT

SWOT analysis allows can also be applied to risk identification and specific pieces of work, focussing on:

Strengths: internal attributes that are helpful to achieving an objective.

Weaknesses: internal attributes that are harmful to achieving an objective.

Opportunities: external conditions that are helpful to achieving an objective.

Threats: external conditions that are harmful to achieving an objective.

Examples:

STRENGTHS	Staff experience, management support				
WEAKNESSES	Communications channels, timescales				
OPPORTUNITIES	Stakeholder relationships, IT developments				
THREATS	Geographic spread, current culture				

7.0 RISK ASSESSMENT

It is important to clearly establish a structured process in which both likelihood and impact are considered for each risk and that the assessment of risk is recorded in a way that facilitates monitoring and prioritisation. As risk in FSS is assessed on the combination of the consequences of an event (impact) and the probability (likelihood), the table below provides a guide to risk levels and how they should be recorded in the FSS Risk Register template.

FSS Risk Registers require the risk owner to identify and record a 'target' risk score as well as the 'current' risk score. The 'target risk score is a score which the risk owner has determined as being tolerable after having undertaken the process of addressing the risk (see para 8.0) and considered the actions to be taken and the FSS appetite for the risk. The risk owner should consider the Board's agreed risk appetite statement when determining the 'target' risk score and the resulting action required to mitigate the risk to the desired level of tolerance.

The risk owner shall carry out such mitigating actions as necessary to reduce the 'current' score to that of the 'target' score. The risk owner must then consider if any further actions to reduce the risk score below that of the target (or tolerable) score are appropriate or necessary having considered the time, effort and cost of implementing such further actions.

<u>For example</u>, where a risk has been reduced from a current score of 100 (very high) to a **tolerable** target score of 20 (medium), the risk owner would then consider whether actions to reduce further to a score of 10 (medium) is necessary or cost effective.

All agreed targets scores must be reviewed on at least an annual basis to ensure they remain aligned with the current risk appetite. Changes in risk appetite may require an adjusted target score either higher or lower.

<u>Impact</u> – The estimated effect of the risk on the objective or strategic outcome in question. This is focussed on scale, scope and resource implications, as well as the risk appetite of FSS.

Impact	Criteria					
Very High – 50	Destructive and unacceptable impact on corporate plan objectives or strategic outcomes that would result in a major change to overall approach. Potentially large resource consequences (>£100K) that outweigh current operational circumstances.					
High – 25	Significant and unacceptable impact on corporate plan objectives or strategic outcomes that would require a material change to critical approach/procedure/process. Resource implications would be challenging to absorb (£50-100K) within current operational circumstances.					
Medium – 10	Moderate impact on corporate plan objectives or strategic outcomes that may require multiple changes in approach/procedure/process. Acceptable level of resource consequences (£10-50K).					
Low – 5	Minor impact on corporate plan objectives or strategic outcomes, requires little overall change in approach. Few resource consequences (£1-10K).					
Negligible – 1	No real impact on achieving corporate plan objectives or strategic outcomes. Financial impact <£1K.					

<u>Likelihood</u> – This is the estimated chance of the risk occurring and is focussed on probability.

Likelihood	Criteria			
Very High – 5	>75% chance of occurring – almost certain to occur.			
High – 4	51-75% chance of occurring – more likely to occur than not.			
Medium – 3	26-50% chance of occurring – fairly likely to occur.			
Low – 2	6-25% chance of occurring – unlikely to occur.			
Rare – 1	1-5% chance of occurring – extremely unlikely to occur.			

Most risks are time based and are not constant and estimating the timing of when a risk may occur is sometimes called 'proximity'. Considering this should inform a judgement on the impact or likelihood of a risk and the timing of any response.

The tables below provide a guide, in line with the SG risk management methodology, to the overall risk level based on multiplying the assessment of the impact and likelihood of a risk. This then informs the risk scores recorded on the FSS risk register template.

Assessing the impact and likelihood of a risk (5x5 matrix):

Impact	Multiplier					
Very High	50	50	100	150	200	250
High	25	25	50	75	100	125
Medium	10	10	20	30	40	50
Low	5	5	10	15	20	25
Negligible	1	1	2	3	4	5
	Multiplier	1	2	3	4	5
Likelihood		Rare	Low	Medium	High	Very
						High

Assessing the overall risk level:

ANNEX B

RISK LEVEL	SCORE	RISK LEVEL DESCRIPTION						
VERY HIGH	100-250	Rating: Unacceptable level of risk exposure that requires						
		immediate mitigating action.						
		Reporting: report the risk to Senior Management Team/Audit						
		Committee/Board.						
HIGH	40-75	Rating: Unacceptable level of risk which requires controls to be						
		put in place to reduce exposure.						
		Reporting: A decision should be taken as to whether risks						
		recorded as high should be escalated. Scores between 40 and						
		60 would not usually be escalated where scores between 61						
		and 75 should be given careful consideration.						
MEDIUM	10-30	Rating – Acceptable level of risk exposure subject to regular						
		active monitoring.						
		Reporting: At Directorate level.						
LOW	1-5	Rating: Acceptable level of risk subject to regular passive						
		monitoring.						
		Reporting: At Directorate level. Consideration should be given						
		as to whether risks recorded as low are still extant.						

As outlined above, once risks have been assessed, the risk priorities for FSS will emerge. The less acceptable the exposure in respect or a risk, the higher the priority which should be given to addressing it. The highest priority risks (e.g. key risks) should be given regular attention at the highest level of the organisation.

8.0 ADDRESSING RISK

Once risks have been identified and assessed, the next stage is to decide what action needs to be taken to address the highlighted risks. The purpose of addressing risks is to turn uncertainty to FSS's benefit by constraining threats and taking advantage of opportunities. There are 5 key aspects of addressing risk, depending on the kind of challenge they present according how likely they are to occur, and the impact if they did occur.

- **Tolerate**: for unavoidable risks the exposure may be tolerable without any further action being taken or so remote as to take mitigating action may be disproportionate to the potential benefit gained.
- **Treat**: for risks that can be reduced or eliminated by prevention or other control action (new systems, revision of processes etc.). By far the greatest number of risks will be treated in this way.
- **Transfer**: where another party can take on some or all of the risk more economically or more effectively (e.g. sharing risk with a contractor). Some risks are not fully transferable in particular it is generally not possible to transfer reputational risk even through the delivery of a service is contracted out.
- **Terminate**: for risks no longer deemed tolerable and where exit is possible (e.g. elements of first class travel arrangements). This option is severely limited in government but can be particularly important in project management if it becomes clear that the projected cost/benefit is in jeopardy.
- Take the Opportunity: This option should be considered whenever tolerating, treating
 or transferring a risk and focusses on managed risk taking. This is a considering of how
 much one is prepared to actively put at risk in order to obtain the benefits of the
 opportunity. It is about comparing the value (financial or otherwise) of potential benefits
 with the loses which might be incurred. Judgement should be taken on the level of
 exposure which is considered tolerable should it be realised.

When considering the option of 'treat' in addressing risk – the following approach should be undertaken when designing control mechanisms to mitigate the risk:

- Preventative Controls: designed to limit the possibility of an undesirable outcome being realised. The more important an undesirable outcome should not arise, the more important it becomes to implement appropriate preventative controls. For example – separation of duty or limitation of action to authorised persons.
- Corrective Controls: designed to correct undesirable outcomes which have been
 realised. They provide a route to achieve some recovery against loss or damage. For
 example—design of contract terms to recover an overpayment or contingency planning
 as this allows an organisation to plan for business continuity or recovery after events
 which they could not control.
- Directive Controls: designed to ensure that a particular outcome is achieved. They
 are particularly important when it is critical an undesirable event is avoided. For
 example a requirement for protective clothing to be worn during the performance of
 dangerous duties, or that staff be trained with required skills before being allowed to
 work unsupervised.
- Detective Controls: designed to identify occasions of undesirable outcomes having been realised. Their effect is, by definition, after the event so they are only appropriate when it is possible to accept the loss or damage. For example – stock or asset checks which detect removal without permission, post implementation reviews which detect lessons learnt and monitoring activities which detect changes that should be responded to.

In designing controls, it is important that the control put in place is proportional to the risk. Apart from the most extreme undesirable outcome (such as loss of human life) it is normally sufficient to design controls to give a reasonable assurance of confining likely loss within the risk appetite of FSS. Generally speaking the purpose of control is to constrain risk rather than to eliminate it.

Where the option to 'treat' the risk by implementing one or more of the above controls is taken, the risk owner will be required to re-score the risk taking account of the degree to which the designed controls have constrained/reduced the risk.

For example, a designed control may mitigate the risk by reduction of the likelihood that a risk event will occur and/or reduction of the impact/effect of a risk event if it does occur. If either the likelihood or impact/effect (or both) is reduced then the overall score will be reduced and this must be recorded for comparison and assessment of the control.

9.0 REVIEWING AND REPORTING RISKS

The management of risk, including Risk Registers (see annex 1), should be reviewed regularly to monitor whether or not the risk profile of FSS is changing, to gain assurance that risk management is effective, and to identify when further action is necessary. FSS currently mandates the following suite of Risk Registers

- Level 1 Strategic Register
- Level 2 Senior Management Team Register
- Level 3 Directorate Registers (x3) / Programme Registers (x3)

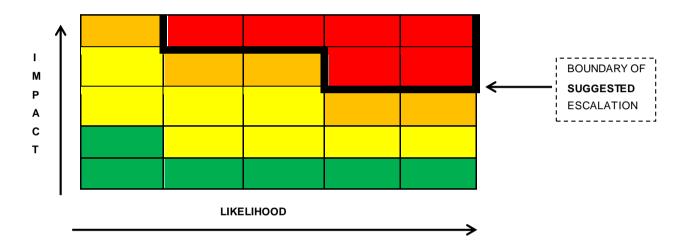

Within FSS, reviews will be undertaken as a minimum:

- Level 1, 2 and 3 (essential core activity) risk registers will be reviewed on a monthly basis at Senior Management Team meetings and Director led meetings as required.
 All risks rated High or Very High will be reviewed in detail and action taken to mitigate risks further, as required. Cross Directorate challenge is welcomed at level 3 should it be appropriate.
- Level 3 (programme) risk registers will be reviewed in accordance with the individual reporting arrangements agreed by the relevant Programme Board and in accordance with the reporting timetable set out by the PMO.
- The Strategic risk register will also be reviewed by the Board annually or by exception, through escalation by SMT and the Audit and Risk Committee, as required.
- The Strategic risk register will be reviewed quarterly by the FSS Audit and Risk Committee. This will form the basis of a report that will comprise of a summary of all risks rated Very High and a copy of the latest version of the Strategic risk register. Any Red risks on the Level 2 SMT risk register shall also be reported to the Committee.
- Discretionary project risk registers will be reviewed in accordance with the individual reporting arrangements agreed by the relevant Project Manager and in accordance with the reporting arrangements set out by the Programme Manager or Branch with support from the PMO..

10.0 RISK ESCALATION

When a risk reaches a level whereby the risk owner can implement no further controls or solutions, the risk must be escalated.

The boundary for suggested escalation within FSS it outlined below, however if the risk owner/Director deems the risk to be of corporate significance, or beyond their delegated tolerance, they can escalate a risk to the Senior Management Team if they are deemed critical or effect FSS as a whole, e.g. if a programme 'amber risk' is identified which has the potential to negatively impact on FSS's reputation. They will then be considered as corporate risks and will be under SMT management and control.

The FSS policy for risk escalation is that all risks rated VERY HIGH or RED should be discussed and considered for escalation to the next level in the risk management chain. Risks that are not rated VERY HIGH or RED but have been highlighted as having the potential to have a wider impact within FSS, or where the scoring gap between the current risk score and target (or tolerable) risk score are considerable, should also be discussed. The FSS risk escalation hierarchy is outlined below and is designed to provide effective support and challenge in managing FSS risks.

FSS BOARD - Consideration of appropriate risks on the Level 1 Strategic Risk Register following discussion and review with ARC.

FSS AUDIT AND RISK COMMITTEE - Consideration of Strategic Risk Register and all VERY HIGH or RED risks reported on SMT Risk Register following SMT discussion.

SENIOR MANAGEMENT TEAM - Consideration of all Level 1 and 2 Risks and any VERY HIGH or RED risks on Level 3 or Programme Risk Registers.

PROGRAMME BOARD - Consideration of all programme & project-level RED risks, or those identified as impacting on other programmes or strategic objectives.

DIRECTOR - Consideration of all Level 3 risks on Directorate Registers and through Role as SRO in relation to Programme or Project Risk Registers.

The following diagram show the risk owner how and where to escalate and/or communicate very high/red risks or risks which may impact on other programmes, projects or strategic objectives.

STRATEGIC & PROGRAMME LEVEL RISKS COMMUNICATED to this level where they could affect project objectives. Risks relating to individual projects should be communicated to other projects & operations where appropriate. PROJECT BOARD/ STRATEGIC (FSS BOARD/ARC/ PROGRAMME BOARD LEVEL OPERATIONAL LEVEL **SMT LEVEL) ESCALATED** against set criteria where they exceed agreed tolerances, such as an unacceptable exposure to risk, if they fall outside where they exceed agreed tolerances – such as an unacceptable exposure to risk, if they fall certain limits, or if they could affect PROGRAMME objectives. **PROJECT & OPERATIONAL LEVEL PROGRAMME, PROJECT & RISKS OPERATIONAL LEVEL RISKS**

11.0 ROLES AND RESPONSIBILITIES

D.L.	B 9.99							
Role	Responsibility							
FSS Board	Overall responsibility for the FSS system of internal control and ensuring							
1 00 Board	that an effective risk management system is in place.							
Audit and Risk	Advise and provide assurance to the Board on FSS's arrangements for risk							
Committee	management, through constructive challenge and review.							
	Responsible for ensuring and implementing effective risk management							
Accountable Officer	processes within FSS and programmes of activity. To ensure there is							
	comprehensive risk reporting arrangements for their area of accountability.							
	Review Level 1 Risks and individual escalated risks.							
Senior Management Team	Take appropriate action to mitigate risks.							
Team	Review Level 1 Risks and new high level risks monthly and advise as to							
	whether contingency plan is required. Manage high level risks within their Directorate (Level 2 Risk Register) that							
	are beyond tolerance of Branch Heads.							
Directors	Escalate corporate and Very High rated risks (beyond their own tolerance)							
	to the Senior Management Team (Level 1 Risk Register).							
	Develop, operate, monitor and report on FSS Risk Management System							
	Embed risk aware culture within FSS through appropriate learning and							
Head of Corporate	development activities							
Services	Provide guidance and support to Branch, Project, Programme, Directorate							
	and Senior Management on risk management methodology within FSS.							
B It III It	Identify, evaluate and manage risks to the delivery of Branch or Corporate							
Branch Heads	Plan objectives.							
	Manage and monitor Risk Registers on behalf of Programme Managers.							
Programme	Identify common risks across programmes or projects so they can be							
Management Office	managed more efficiently or escalated. Highlight increasing risks and							
	potential new risks to Programme Manager.							
	Monitor and review RED high level risks to the delivery of programme or							
Programme Boards	project objectives							
Trogramme Boards	Escalate to Senior Management Team (Level 1 Risk Register) as							
	necessary.							
	Is accountable for the Programme Risk register and ensures risk							
	management activities are operating effectively and that key risks are being							
Senior Responsible	dealt with at the appropriate senior level.							
Owners (SRO)	Monitor and review all risks to the delivery of programme or project							
	objectives Review and manage high level programme/project risks and escalate to							
	Senior Management Team (Level 1 Risk Register) as necessary.							
	Ensure risk management activities are being carried out through the							
Programme	programme and respective projects. Identify, evaluate and manage risks to							
Managers	the delivery of programmes and projects.							
	Escalate risks to SRO/Programme Board as necessary.							
AU 04 - #	Take ownership of individual Branch and Project risks where appropriate.							
All Staff	Be responsible for managing risks as an integral part of the Branch							
	be responsible for managing risks as an integral part of the Branch							

12.0 REVIEW OF RISK MANAGEMENT POLICY AND GUIDANCE

To ensure it remains fit for purpose, this policy and associated documents will be reviewed, as a minimum, on an annual basis.

13.0 FURTHER GUIDANCE

Further guidance on the FSS risk management policy can be sought from the Head of Corporate Services on 01224 28147 or garry.mournian@fss.scot. Additional information and supporting documentation on risk management within Government can be found:
